

CSE 3330/CSE 3345 Group Project

MY FAVS

Project Presentation Guidelines

This document indicates some minimal requirements for your presentation. If you produce only what is contained herein, do not be surprised if your grade is not 100%. You should plan to present for 12 - 15 minutes and allow for a few minutes of questions. Time slots will be strictly enforced to 20 minutes.

- Brief Introduction of the problem and your group sees it (emphasis on brief)
- Summarize the general approach taken to solve the problem and briefly provide a motivation for aforementioned approach.
- Present the design (and implementation) for MyFAVS.
 - Consider the “high” points from your paper. Go into an adequate level of detail for a 12 - 15 minute presentation, but no deeper.
 - Demo (app, screenshots, examples)
 - Make sure to include decisions made
 - Software Architecture
 - Database Design
 - Data Interchange
 - Application Service Design
 - GUI Best Practices
 - Usability Problem and Defect Management
- What is your WOW factor and why do you think it is worth full credit? (be brief, don't dwell here.)
- What are the best directions of future research and/or implementations? What would be the preliminary schedule of your next steps if you were given three more months to continue development.

Suggestions:

- Practice (practice, practice, practice). Know who is going to say what, when they are going to say it, and how it will be said. Don't “wing it”.
- General guideline is 1 content slide per minute of presentation. Do the math and figure out how many slides you should have.
- Do not read from your slides. Put the most important details/results/drawings/plots/etc. and contextualize them verbally
- Use small fonts and complete sentences in your presentations sparingly.
